

MARIA NASEEM

AI Engineer | Applied AI for Enterprise Workflows

Islamabad, Pakistan | marianaseem99@gmail.com | +92 306 6775777

LinkedIn | GitHub | Portfolio

Open to relocation and remote international AI engineering roles

PROFESSIONAL SUMMARY

AI engineer building enterprise applications end-to-end, from ingestion and inference through APIs, human review, deployment, and monitoring. Recent work spans CPU-based video analytics, document intelligence and RAG, multilingual sentiment analysis, agentic workflows, and sensitive-data protection. Combine hands-on implementation with solution design, requirements discovery, and client-facing delivery. Project descriptions distinguish deployed services, internal validation, and work in progress.

PROFESSIONAL EXPERIENCE

AI Solutions Engineer & Full-Stack AI | Arwen Tech, Islamabad

2024 - Present

- Completed Video Analytics end-to-end: RTSP ingestion, YOLO detection, ONNX/OpenVINO CPU inference, tracking, counting events, FastAPI services, and deployment integration. Deployed on Azure Container Apps and demonstrated at a client facility; rollout updates remain pending.
- Designed and built a facial-recognition attendance workflow with enrollment, candidate retrieval, human verification, and embedding/inference using OpenCV SFace and FAISS. Validated internally on-premises.
- Built enterprise workflows for contract onboarding, SLA tracking, ticketing, notifications, and integrations with FastAPI, Next.js, PostgreSQL, and Redis/Celery; built asynchronous OCR and document ingestion.
- Built a privacy-vault service for sensitive-data detection, reversible tokenization, encrypted mappings, policy-controlled unmasking, and tamper-evident audit records. In internal use for testing and hardening.
- Built multilingual feedback processing with normalization, translation, sentiment analysis, and human review. Running sentiment analysis internally; LoRA training and full observability remain in progress.
- Built monitoring and AI-assisted alert triage with Prometheus, Grafana, Alertmanager, and optional MCP integration. AI analysis suggests hypotheses and checks; example dashboards distinguish synthetic KPIs from live metrics. Used Docker and GitHub Actions for repeatable delivery.

Corporate Affairs, Legal Operations & AI Solutions Engineer | Confidential Organization, Islamabad

2024 - 2025

- Identified contract and governance workflow needs and built a self-initiated document intelligence system: extraction, Claude-assisted validation, LangGraph orchestration, and PostgreSQL/pgvector RAG. Implementation completed; adoption and business outcomes are not quantified.
- Primary role covered stakeholder coordination, governance meetings, agendas, minutes, contracts, and regulatory filings. Supported compliance reviews and cross-functional operations.
- Delivered a corporate WordPress website and online shop with custom themes, plugins, and third-party integrations; contributed to internal booking applications.

Co-Founder & Full-Stack Developer | ZUM Services Providers

2023 - 2025

- Owned application development alongside client acquisition and service delivery: requirements, backend logic, APIs, relational data, frontend integration, and deployment tooling.
- Delivered websites, digital operations, solar proposals, and technical layouts; used structured LLM prompting for marketing and content workflows.

Blockchain Developer | MediaPark

2020 - 2022

- Built native blockchain components covering blocks, transactions, validation, ECDSA signing, and socket-based peer-to-peer synchronization.
- Developed smart-contract integration, access controls, and technical documentation for decentralized applications.

Earlier Career

2016 - 2020

Operations and IT support: Prime Tele Power Solution (2016-2017), Team Work Construction (2018-2020). IBM Pakistan internship (2016): supported GPON deployment documentation and provisioning using enterprise systems.

TECHNICAL SKILLS

Core Expertise: Applied AI, computer vision, document intelligence and RAG, solution design, requirements discovery, client-facing delivery.

Production AI: RTSP pipelines, YOLO, OpenVINO, OpenCV, ONNX, FAISS, LangGraph, Claude/OpenAI integrations, MCP, human-in-the-loop review, multilingual NLP, pgvector.

Engineering: Python, FastAPI, TypeScript, Next.js, PostgreSQL, Redis, Celery, REST APIs, authentication and authorization.

Cloud / Infrastructure: Azure Container Apps, Docker, Docker Compose, GitHub Actions, Linux, Nginx.

Tools: Prometheus, Grafana, Alertmanager, pytest, OCR and document-processing tooling.

SELECTED WORK & PUBLIC EVIDENCE

- Video Analytics: Azure-deployed camera-based counting workflow; architecture and video demonstrations in the portfolio. Client identity and source code are confidential.
- Contract Intelligence: document extraction, semantic retrieval, human review, and workflow automation; architecture case study in the portfolio.
- Agentic Observability Platform: public implementation with monitoring dashboards and advisory alert analysis. Synthetic examples are not production outcome measurements.

CERTIFICATIONS & EDUCATION

Master of Information Technology | Quaid-e-Azam University | 2016

Agentic AI Level 2 - Professional | PIAIC / Panaversity | 2026

Generative AI Applications | Coursera | 2026

Build RAG Applications | IBM / Coursera | 2026
