- ✓ 10+ Years Professional Experience
 - ✓ 4+ Years AI Engineering
 - ✓ 12+ Production Projects
 - ✓ Enterprise & Government AI Solutions
- ✓ Computer Vision
 - ✓ Agentic AI & Multi-Agent Systems
 - ✓ LLM Applications & Real-Time AI
 - ✓ Solution Architecture & System Design

PROFESSIONAL SUMMARY

Senior AI Engineer who designs and ships production AI systems for enterprise and government clients. Architected real-time video analytics system, a four-stage facial recognition attendance system running live on-premises, and a bank-grade data protection vault — each delivered from requirements through on-site client demonstrations. Built multiple AI systems spanning computer vision, agentic workflows, and LLM applications. Currently leading AI engineering initiatives at Arwen Tech and delivering client-facing AI engineering engagements through ZumfluxAI.

CORE COMPETENCIES

Agentic AI	LLM Applications	Multi-Agent Systems
Computer Vision	RAG Pipelines	Real-Time AI
AI System Design	FastAPI	Azure Application Deployment
Docker & CI/CD	Python	SQL PostgreSQL pgvector Qdrant

TECHNICAL SKILLS

AI & ML: Agentic AI, LLM Applications, Multi-Agent Systems, RAG, Computer Vision, NLP, OCR
Frameworks: LangGraph, LangChain, OpenAI SDK, Anthropic SDK, FastAPI, YOLO/Ultralytics, OpenCV, ONNX, OpenVINO
Backend: Python, C++, PHP, Redis, Celery, WebSockets, P2P Networking
Cloud & DevOps: Azure, Docker, GitHub Actions, Linux, Nginx
Databases: SQL, PostgreSQL, pgvector, Qdrant,
Security: Encryption, ECDSA, HMAC, Tokenization, Key Management, Access Control, Audit Logging
Frontend: Next.js, React, TypeScript, Tailwind CSS

PROFESSIONAL EXPERIENCE

Software Engineer — AI Engineering & Solutions Architecture
Arwen Tech · Islamabad, Pakistan

2025 — Present

- Designed end-to-end architecture for real-time production counting using YOLO and OpenVINO. Built RTSP pipeline with object tracking, tamper detection, and FastAPI microservices. Containerized and deployed the application on Azure. Successfully demonstrated solution at client production facility.
- Engineered a four-stage facial recognition attendance system processing multi-camera live video streams with human verification gates. Designed to scale to thousands of employees. Deployed live on-premises for real-world training and validation.
- Built enterprise Security Vault protecting sensitive customer information through tokenization and encryption with immutable audit logging. 86 automated tests.
- Shipped an MCP-native observability platform with AI-powered alert analysis for root-cause inference and severity classification. Built and deployed the MCP server for tool integration.
- Delivered a multilingual NLP platform analyzing public feedback across 8+ low-resource languages with automated sentiment analysis and AI briefing generation. 107 tests.

Corporate Affairs, Legal Operations & AI Solutions Engineer

2024 — 2025

Green Tourism Pvt. Ltd. · Islamabad, Pakistan

- Identified operational bottlenecks and built an AI contract intelligence platform automating legal operations, including contract ingestion, semantic search, metadata extraction, and workflow orchestration for a national tourism company. Tech: LangGraph, Claude, RAG, pgvector.
- Automated meeting scheduling, minutes management, follow-up generation, and contract lifecycle workflows with audit logging.
- Served as the primary legal and regulatory liaison, coordinating compliance, Board of Directors activities, and cross-functional stakeholder communication.
- Delivered the corporate website and e-commerce platform with custom development and API integrations.

Co-Founder · Full-Stack Developer

2023 — 2025

ZUM Services Providers · Pakistan

- Co-founded and built the full-stack platform end-to-end — backend, database, APIs, and frontend — while running business operations, client acquisition, and service delivery.
- Integrated Generative AI capabilities into business workflows for automated content generation, information processing, and operational assistance.
- Containerized services with Docker and implemented CI/CD through GitHub Actions for production deployments.

Blockchain Developer

2020 — 2022

MediaPark · Pakistan

- Designed and developed native blockchain systems and DApps, implementing blocks, transactions, consensus validation, and ECDSA-based cryptographic signing.
- Implemented socket-based P2P networking for node synchronization, block propagation, and transaction broadcasting across the blockchain network.
- Built compliance-oriented smart contract frameworks with access controls, encryption, auditability, and C++/PHP backend integration.

Previous Experience

2016 — 2020

IBM Pakistan (Intern) · Prime Tele Power · Team Work Construction

- Software Development · Operations · IT Support

SELECTED PROJECTS

AI Video Analytics Platform — Designed real-time production counting architecture for a regulated-industry client; optimized YOLO inference with OpenVINO, deployed on Azure, and demonstrated on-site. *Tech: YOLO, OpenCV, FastAPI, Azure.*

Security Vault — Built an enterprise data protection microservice using tokenization, encryption, and immutable audit trails. *Tech: FastAPI, PostgreSQL, Redis.*

Agentic Contract Intelligence — Built a multi-agent system automating contract intelligence and lifecycle workflows for a national tourism company. *Tech: LangGraph, Claude, RAG.*

Sales Lead AI FTE Engine — Designed a runtime-configurable framework for generating task-specific AI workers from defined specifications; successfully implemented a Sales Lead FTE for property websites.

EDUCATION

Master of Information Technology — Quaid-i-Azam University

CERTIFICATIONS

Agentic AI Professional | **PIAIC**
Build RAG Applications | **IBM** · Generative AI | **IBM**
AI for Everyone | **DeepLearning.AI**

PROFESSIONAL DEVELOPMENT

Alibaba Cloud Professional: Cloud Architect — Certification Preparation (2026)
